
Supplementary Fig. 4. Maximum likelihood phylogenetic tree of isolates of the *Fusarium oxysporum* species complex based on *CaM* gene. Isolates obtained in this study are indicated in red. Maximum likelihood bootstrap support values ≥70% and Bayesian posterior probabilities ≥0.90 are shown at the nodes. Lineages are highlighted with colored boxes. Ex-type strains are indicated in bold and marked with a superscript "T". *Fusarium fujikuroi* (CBS 221.76) was used as the outgroup.
